ReactJS Design Challenge

How to start

1. Please implement the solution, preferably on https://codesandbox.io/

   Feel free to use other tools that you may prefer.

Create a design for the following UI. Feel free to modify it, change the visual representations, etc.
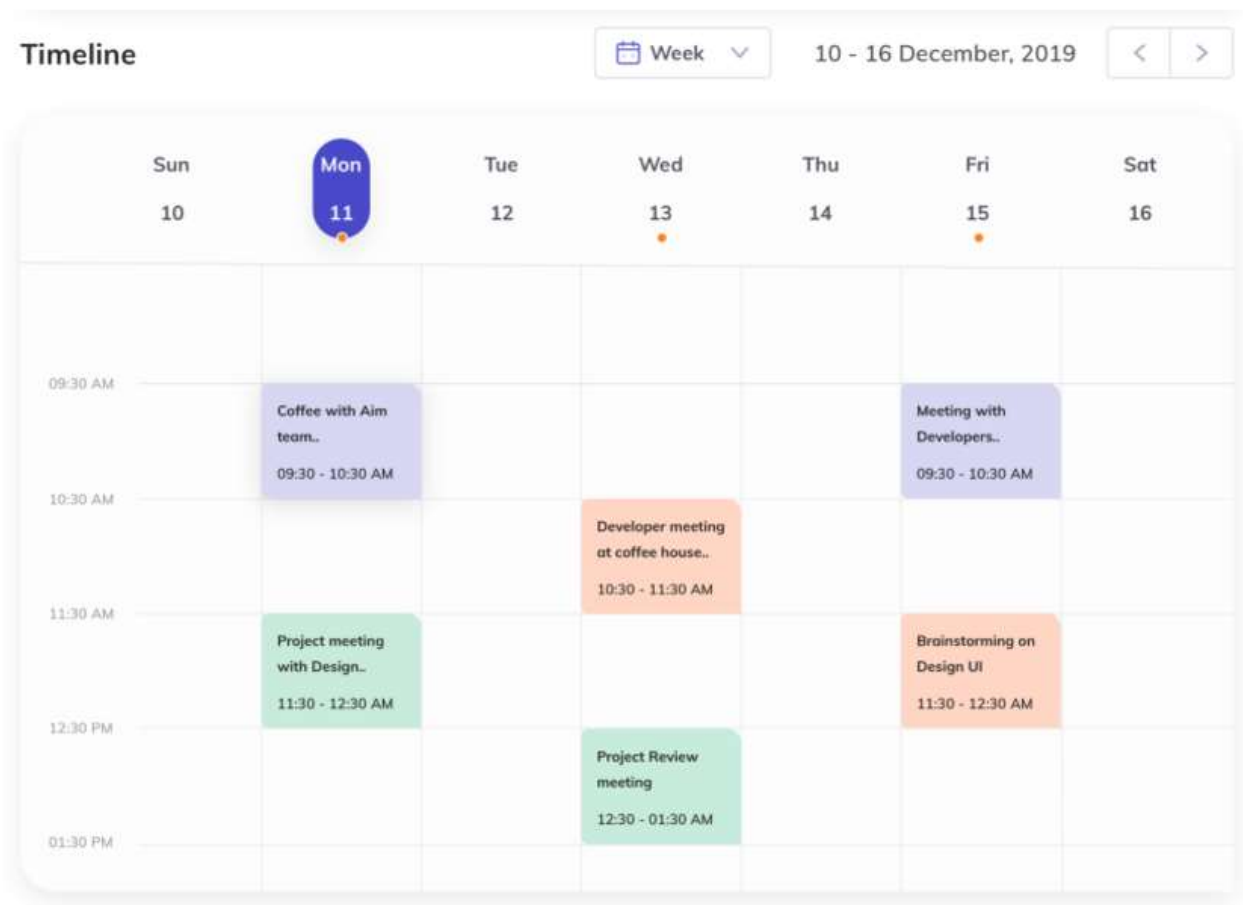

Notes:

Do **NOT** use any third-party libraries, unless explicitly specified.

1️⃣ The Calendar

Bootstrap an app using Pure ReactJS (https://create-react-app.dev/) or NextJS (https://nextjs.org/docs/getting-started), and using markup, JS, and CSS

(Ignore UI Styling at this stage).

2️⃣ Drag-n-Drop

Create a form in a sidebar, that would allow the user to add a title, start and end time and create events on the calendar. Consider using Formik.

The data does not have to be persisted.

Bonus points for using the hook `useReducer`.

3️⃣ Collision Detection

While adding an event, detect any conflicts with existing events and report the same to the user.

4️⃣ Styling (Optional)

a. Use a CSS library of your preference and style everything.

b. **Bonus** 🥳: Push your code on Github

Notes:
